# Chapter 1

## Class Index

### 1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">gamemanager5</a>	5
<a href="#">mainmenu</a>	8
<a href="#">nextwindow</a>	9
<a href="#">restartwindow</a>	11
<a href="#">sbox</a>	12

## Chapter 2

# File Index

### 2.1 File List

Here is a list of all documented files with brief descriptions:

<a href="#">gamemanager5.cpp</a>	
Source file for <a href="#">gamemanager5.h</a>	15
<b>gamemanager5.h</b>	??
<a href="#">mainmenu.cpp</a>	
Source file for <a href="#">mainmenu.h</a>	15
<b>mainmenu.h</b>	??
<a href="#">nextwindow.cpp</a>	
Source file for <a href="#">nextwindow.h</a>	15
<b>nextwindow.h</b>	??
<a href="#">restartwindow.cpp</a>	
Source file for <a href="#">restartwindow.h</a>	16
<b>restartwindow.h</b>	??
<b>sbox.h</b>	??

## Chapter 3

# Class Documentation

### 3.1 gamemanager5 Class Reference

#### Public Slots

- void [updateTimer](#) ()  
*slot function*

#### Public Member Functions

- [gamemanager5](#) (QObject \*parent=0)  
*default constructor*
- [gamemanager5](#) (QGraphicsScene \*scene, [sbox](#) \*box, int level, int score, int character)  
*constructor of the gameManager class*
- void **showNumbers** ()
- void **showpic** (int)

#### Public Attributes

- [sbox](#) \* **box**
- QGraphicsTextItem \* **inputTextItem**
- QString [temp](#)  
*TextItem to show the input number.*
- QGraphicsScene \* [scene](#)  
*the game scene*
- QPixmap [imagebackground](#)  
*background image*
- QGraphicsPixmapItem \* [itembackground](#)  
*item for background image*

- QPixmap [imageframe](#)  
*square frame image*
- QGraphicsPixmapItem \* [itemframe](#)  
*item for square frame*
- QPixmap [imagedoors](#)  
*square frame image*
- QGraphicsPixmapItem \* [itemdoors](#)  
*item for square frame*
- QGraphicsTextItem \* **itemoption1**
- QGraphicsTextItem \* **itemoption2**
- QGraphicsTextItem \* **question**
- [nextwindow](#) \* [nextWindow1](#)  
*nextwindow that shows up after winning a level*
- [restartwindow](#) \* [restartWindow1](#)  
*restartwindow that shows up after losing a level*
- QString **state**
- QTimer \* [gameTimer](#)  
*timer for the game*
- int **number1**
- int **number2**
- int **option1**
- int **option2**
- int **luck**
- int **counter**
- int [character](#)  
*int determines if it's addition or multiplication*
- int [level](#)  
*int shows which level we're at*
- int [timer](#)  
*int timer*
- int [score](#)  
*int score*
- int [second](#)  
*int to check the time*
- QGraphicsTextItem \* [clock](#)  
*textitem for the timer*
- QGraphicsTextItem \* [scoreItem](#)  
*textitem for the score*

### 3.1.1 Constructor & Destructor Documentation

**3.1.1.1** `gamemanager5::gamemanager5 ( QGraphicsScene * s, sbox * b, int l, int sc, int c )`

constructor of the gameManager class

It takes as parameters the scene of the game to add and remove items from it. It takes the level to determine the numbers and the array lengths. It takes the textItem "score" to change it with the next level logic. It takes the int "operation" to check if the operation is addition or multiplication .

#### Parameters

<i>scene</i>	
<i>level</i>	
<i>score</i>	
<i>operation</i>	

<update function when timer is timeout

### 3.1.2 Member Function Documentation

**3.1.2.1** `void gamemanager5::updateTimer ( ) [slot]`

slot function

This is where the timer and score are updated.

### 3.1.3 Member Data Documentation

**3.1.3.1** `QString gamemanager5::temp`

TextItem to show the input number.

string in which the input number is stored

The documentation for this class was generated from the following files:

- `gamemanager5.h`
- [gamemanager5.cpp](#)

## 3.2 mainmenu Class Reference

### Public Slots

- `void chooseAdd ( )`  
*function when choosing addition*

- void `chooseMult` ()  
*function when choosing addition*

## Public Member Functions

- `mainmenu` (QWidget \*parent=0)  
*default constructor*
- `mainmenu` (gamemanager5 \*game, QGraphicsView \*view)  
*constructor for the mainmenu class*

## Public Attributes

- QLabel \* **choose**
- QPushButton \* `addition`  
*button "Addition"*
- QPushButton \* `multiplication`  
*button "Multiplication"*
- QVBoxLayout \* **vBox**
- gamemanager5 \* `game`  
*gameManager class that it will use and edit*
- QGraphicsView \* **view**
- int `operation`  
*int to determine addition or multiplication*

## 3.2.1 Constructor & Destructor Documentation

### 3.2.1.1 `mainmenu::mainmenu ( gamemanager5 * game, QGraphicsView * view )`

constructor for the mainmenu class

It takes as parameter gameManager "game" to control the game accordingly

#### Parameters

<code>game</code>	
-------------------	--

<chooseAdd function when addition is clicked

<chooseMult function when multiplication is clicked

## 3.2.2 Member Function Documentation

### 3.2.2.1 `void mainmenu::chooseAdd ( ) [slot]`

function when choosing addition

slot function

This function sets the operation to 0 since the player chose to get the addition. It then starts the game by filling the arrays accordingly, starting the timers and closing the commandWin

#### 3.2.2.2 void mainmenu::chooseMult ( ) [slot]

function when choosing addition

slot function

This function sets the operation to 1 since the player chose to get the multiplication. It then starts the game by filling the arrays accordingly, starting the timers and closing the commandWin

The documentation for this class was generated from the following files:

- mainmenu.h
- [mainmenu.cpp](#)

## 3.3 nextwindow Class Reference

### Public Slots

- void [nextLevel](#) ()  
*slot function*
- void [restartLevel](#) ()  
*slot function*

### Public Member Functions

- [nextwindow](#) (QWidget \*parent=0)  
*default constructor*
- [nextwindow](#) (gamemanager5 \*, [sbox](#) \*)  
*constructor of the nextwindow class*

### Public Attributes

- [gamemanager5](#) \* [game](#)  
*gameManager class that we will use and edit*
- [sbox](#) \* **frame**
- int **score**
- int **level**
- int **operation**
- QGraphicsScene \* **scene**

- QLabel \* **scoreLabel**
- QLabel \* **sug**
- QPushButton \* [nextLev](#)  
    *button "Next Level"*
- QPushButton \* [restartLev](#)  
    *button "Restart Level"*
- QGridLayout \* **gridBox**

### 3.3.1 Constructor & Destructor Documentation

#### 3.3.1.1 nextwindow::nextwindow ( gamemanager5 \* *game*, vbox \* *frame* )

constructor of the nextwindow class

This is where everything is instantiated. The buttons and labels are added to the grid layout.

##### Parameters

<i>game</i>	
<i>vbox</i>	

<nextLevel function when nextLev is clicked

<restartLevel function when restartLev is clicked

### 3.3.2 Member Function Documentation

#### 3.3.2.1 void nextwindow::nextLevel ( ) [slot]

slot function

This is where the level parameter is incremented and and everything is re-initialized with the new score and level.

#### 3.3.2.2 void nextwindow::restartLevel ( ) [slot]

slot function

If the player chooses to restart the level, the score is set to zero, the level parameter is set to its initial value and the game is re-initialized.

The documentation for this class was generated from the following files:

- nextwindow.h
- [nextwindow.cpp](#)

## 3.4 restartwindow Class Reference

### Public Slots

- void [restartLevel](#) ()  
*slot function*

### Public Member Functions

- [restartwindow](#) (QWidget \*parent=0)  
*default constructor*
- [restartwindow](#) (gamemanager5 \*, [sbox](#) \*)  
*constructor of the restartwindow class*

### Public Attributes

- [gamemanager5](#) \* [game](#)  
*gameManager class that we will use and edit*
- [sbox](#) \* **frame**
- int **score**
- int **level**
- int **operation**
- QGraphicsScene \* **scene**
- QLabel \* **scoreLabel**
- QLabel \* **sug**
- QPushButton \* [restartLev](#)  
*button "Restart Level"*
- QGridLayout \* **gridBox**

### 3.4.1 Constructor & Destructor Documentation

#### 3.4.1.1 restartwindow::restartwindow ( gamemanager5 \* game, sbox \* frame )

constructor of the restartwindow class

This is where everything is instantiated. The buttons and labels are added to the grid layout.

#### Parameters

<i>game</i>	
<i>sbox</i>	

<restartLevel function when restartLev is clicked

### 3.4.2 Member Function Documentation

#### 3.4.2.1 void restartwindow::restartLevel ( ) [slot]

slot function

If the player chooses to restart the level, the score is set to zero, the level parameter is set to its initial value and the game is re-initialized.

The documentation for this class was generated from the following files:

- restartwindow.h
- [restartwindow.cpp](#)

## 3.5 sbox Class Reference

### Public Member Functions

- void **keyPressEvent** (QKeyEvent \*event)

### Public Attributes

- int **move**

The documentation for this class was generated from the following files:

- sbox.h
- sbox.cpp

## Chapter 4

# File Documentation

### 4.1 gamemanager5.cpp File Reference

source file for [gamemanager5.h](#)

```
#include "gamemanager5.h" #include "sbox.h" #include "mainmenu.-  
h" #include "nextwindow.h" #include "restartwindow.h"
```

#### 4.1.1 Detailed Description

source file for [gamemanager5.h](#)

### 4.2 mainmenu.cpp File Reference

source file for [mainmenu.h](#)

```
#include "mainmenu.h" #include "sbox.h" #include "gamemanager5.-  
h"
```

#### 4.2.1 Detailed Description

source file for [mainmenu.h](#)

### 4.3 nextwindow.cpp File Reference

source file for [nextwindow.h](#)

```
#include "nextwindow.h" #include "gamemanager5.h" #include  
"sbox.h"
```

### 4.3.1 Detailed Description

source file for [nextwindow.h](#)

## 4.4 restartwindow.cpp File Reference

source file for [restartwindow.h](#)

```
#include "restartwindow.h"      #include "gamemanager5.h" ×  
#include "sbox.h"
```

### 4.4.1 Detailed Description

source file for [restartwindow.h](#)
